Stabilizing bar

063.0900 Stabilizing bar for screens 40 inch - 55 inch

By connecting the fully divisible stands with our stabilizing bar (063.0900) the set will offer a strong and easy to build up VideoWall construction. SmartMetals advises to use 2 bars in between two stands with a 2x2 VideoWall configuration. For a 3x3 VideoWall configuration in between stands 2 pieces as well, in total 4 pieces. Where required a stand extension piece of 95 cm (063.0295) is available to lengthen the stands to 285 cm. A stand head with four point coupling mounting system (063.1025) can be added, as a tilt function of +1° till -4° is integrated to help levelling the displays on the stand. The displays can be fitted with brackets with three point coupling (063.03xx), which by adding the additional coupling bolt can be used as four point coupling mounting system.
